CISCO Secure

Secure Remote Workers

We want to help your customers work remotely and securely. Right now, the abrupt shift towards remote work creates security challenges – keeping your customers' business running in a very different environment or at a greater scale. It's putting a strain on both security and IT teams who are quickly supporting an unprecedented number of offsite workers and their devices – without compromising security.

In this new reality, give customers a simple and easy way to secure their remote workers. The Cisco Secure Remote Worker solution unifies user and device protection at scale, making it easy to verify, enable secure access and defend remote workers at anytime from anywhere. This integrated solution helps accelerate your business success with security that works together.

Duo
verifies the identity of all users before granting access to corporate applications.

AnyConnect
enables secure access to the enterprise network for any user, from any device, at any time, in any location.

Umbrella
provides the first line of defense against threats on the internet wherever users go.

AMP for Endpoints
provides the last line of defense, enabling protection, detection and response on the endpoint against known and unknown threats.
